

To Whom It May Concern,

I am pleased to offer this letter of reference for Marc Masotti and Masotti Construction Inc. Masotti Construction has been working with Jamieson Laboratories since 1994 when they built our main Windsor manufacturing and distribution facility and corporate headquarters. Jamieson has consistently been voted Canada's most trusted brand of vitamins, and for good reason: in a rapidly growing marketplace, we set ourselves apart with our industry-leading commitment to providing consumers with the purest, safest and most effective natural health solutions available. In our field, the proposition of carrying out a construction project in and around the production of pharmaceuticals requires stringent requirements to ensure no contamination or disruption. Marc ensures that his crews are fully trained and up to speed in all our company protocol and most importantly that they follow it.

Throughout the years Masotti Construction has been our preferred contractor completing multiple additions to our warehousing and manufacturing areas, interior retrofits to our laboratories and renovations to our manufacturing area among other interior plant and facility work. Along with this Marc and his team look after many of our larger yearly maintenance projects. Masotti continues to be competitive in pricing and most importantly they take ownership of the job and ensure completion. Equally important has been their willingness to meet demanding schedules and accommodate ongoing operations while doing their work. Being a pharmaceutical facility, we are obligated to maintain a very high-quality control standard and Marc and his team deliver on these expectations on every project.

Our experience with Marc Masotti and Masotti Construction has been very positive. I would highly recommend.

Terry Patrick, Director  
Production, Maintenance, and Engineering
